

Karen Gleason: Inventing at the nanoscale and growing an innovation ecosystem

I found she was in the Colonial School District in Conshohocken for HS. I'm guessing she had scholarships.

I just googled – wow – she's brilliant. The LinkedIn has a photo and education – based on her BS graduation date I'm guessing she's 62. Third link has photo – and the 4th. She's a large woman – does she look like Marie?

I came across Marie's husband's obit – he died in 2001 – Fayetteville, NC age 72. Karen is listed in the obit as Klincewicz Gleason. The obit is not long – he had 2 sisters. Didn't see grandchildren listed.

This is a great article about her swimming record article 2001 – and mentions her husband, Edward Gleason. <https://news.mit.edu/2001/professors-swim-record-broken-after-20-years>

An article with photo 2019. <https://news.mit.edu/2016/karen-gleason-inventing-nanoscale-growing-innovation-ecosystem-1017>

Here she is in a 2014 you tube <https://www.youtube.com/watch?v=9jZkvZW00-o> I see a wedding ring.
